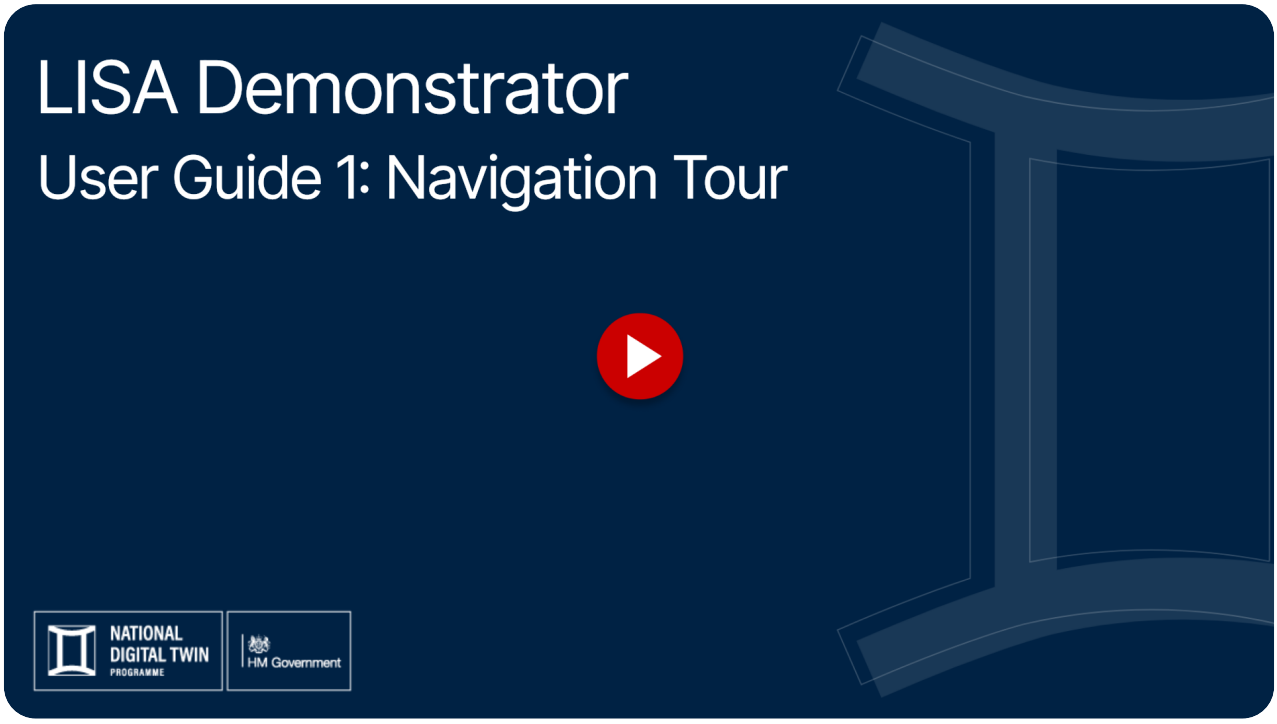
LISA - User Guide 1: Navigation Tour

Powered by guidde



This user guide is an introduction to the LISA demonstrator, developed as part of the UK government's National Digital Twin programme. It provides an overview of the application and a walkthrough of how to navigate it.

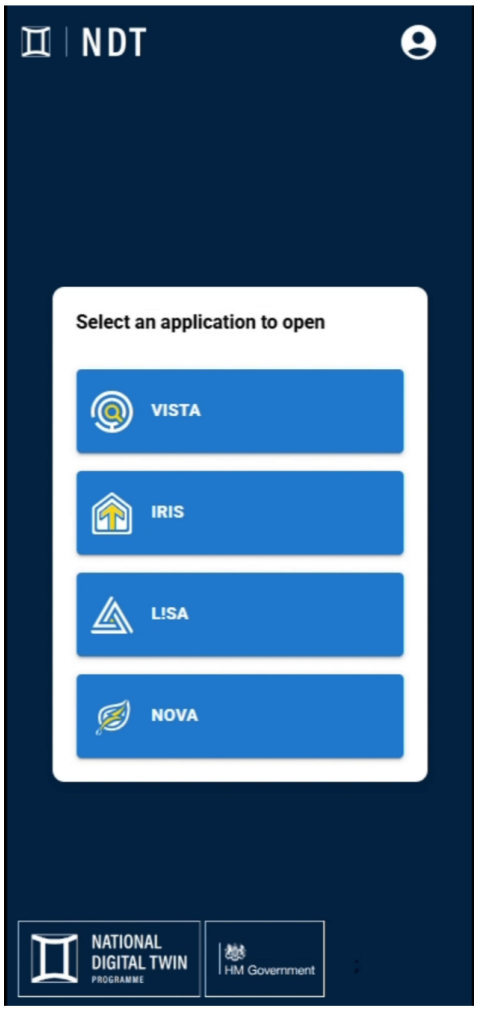
01 LISA Application Overview

LISA is a web-based crisis and incident management application designed to support real-time decision-making, structured logging, and cross-agency collaboration during emergency incidents. It allows teams to digitally manage incidents, capture critical information, and securely share updates across stakeholders. As LISA continues to evolve, its functionality will expand in future iterations. To access LISA, use your NDTP login credentials to sign in.

02 Accessing LISA Home Page

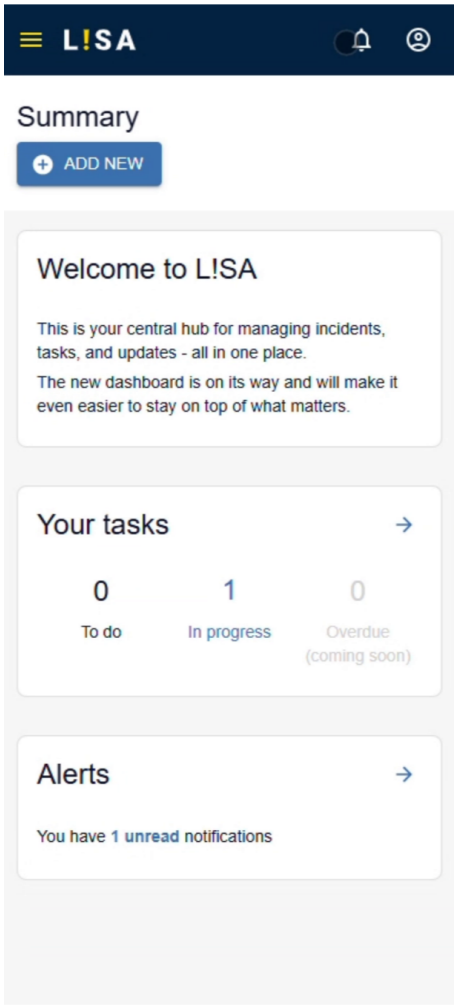
To access LISA, use your NDTP login credentials to sign in.

From the NDTP landing page, locate the LISA tile and select it to launch the application. You will be taken to the home page.



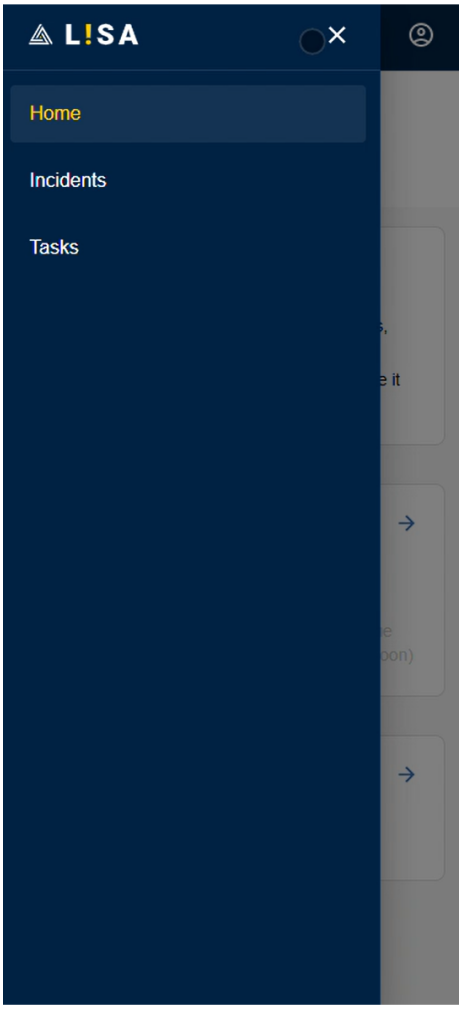
03 Navigating the Home Page

The home page provides a snapshot of the current operational state and your personal workload. Use the sidebar to navigate between pages. Select the bell icon to view alerts.



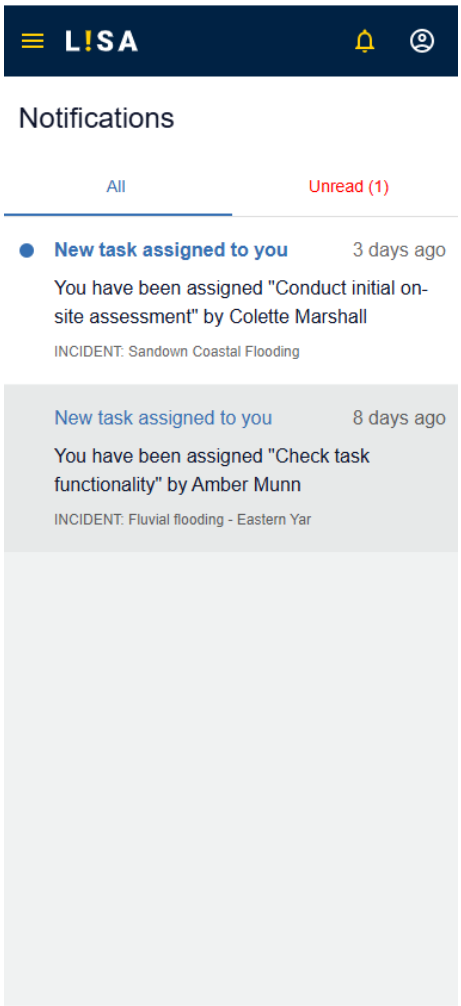
04 Side Bar Navigation

Open the side bar by selecting the burger menu in the top right-hand corner of the home page. This allows you to navigate between the Home Page, Incidents Page, and Tasks Page.



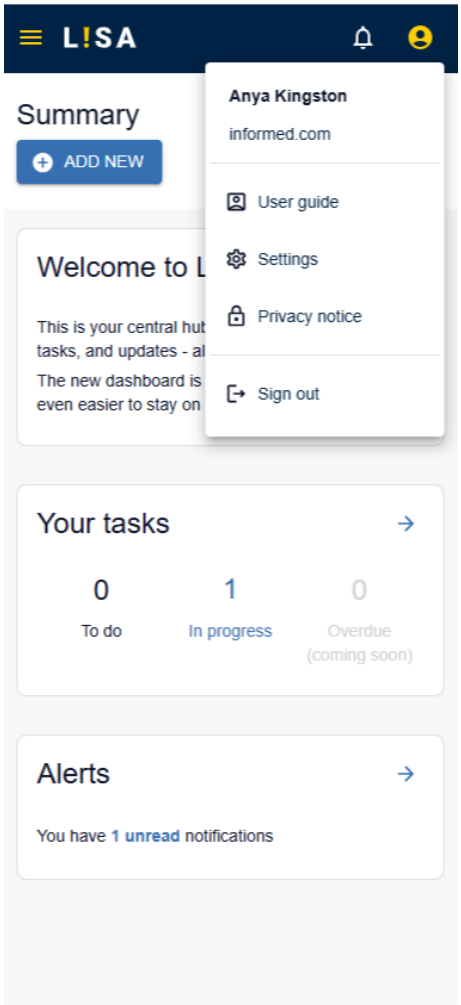
05 The Notifications Page

From the home screen, select the bell icon to access your notifications. This will display updates on your tasks, or any mentions of you in log entries. The main tab displays all notifications, and the right tab displays notifications you have not opened yet.



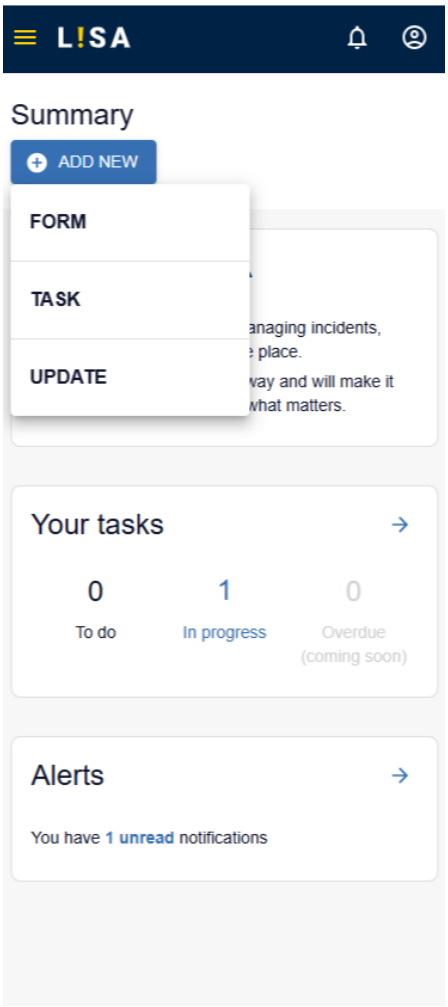
06 Accessing your Profile, Settings, Privacy Notice, and Sign Out

Select the profile icon in the top right corner to access settings, the privacy notice, download the user guide for offline reference, or to sign out.



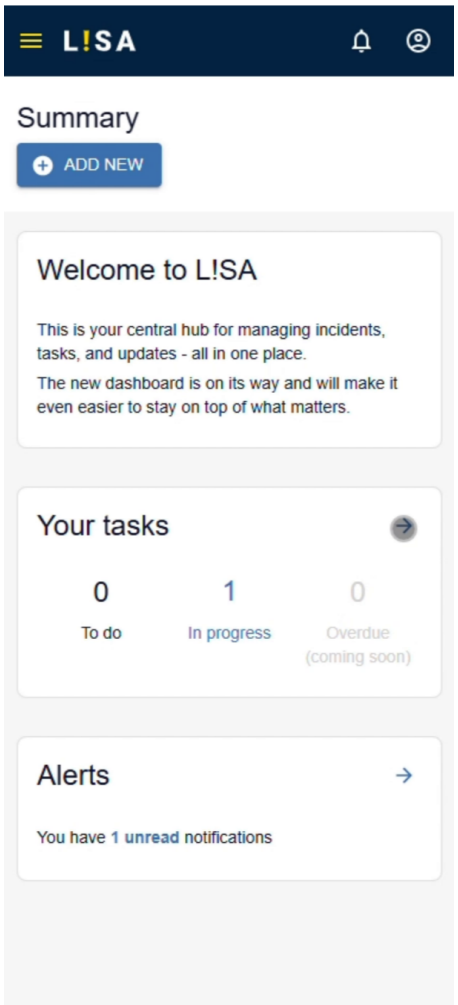
07 The Add New Button

Below the summary header is the Add New button. This is the primary entry point for rapid logging. Use this button to immediately record a form, update, or task without navigating to a specific incident first. Further details on how to add forms, updates, and tasks can be found in LISA User Guide 2.



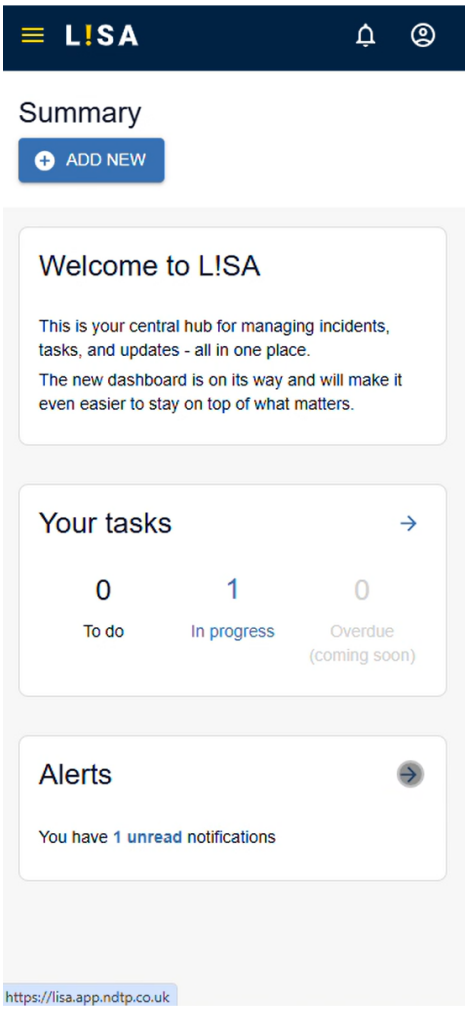
08 Your Tasks Card Explanation

The Your Tasks card provides a real-time count of your active responsibilities. The To Do category refers to new tasks assigned to you that have not yet been started. The In Progress category counts the tasks you are currently working on. Select the blue arrow to open the full tasks page and manage these entries.



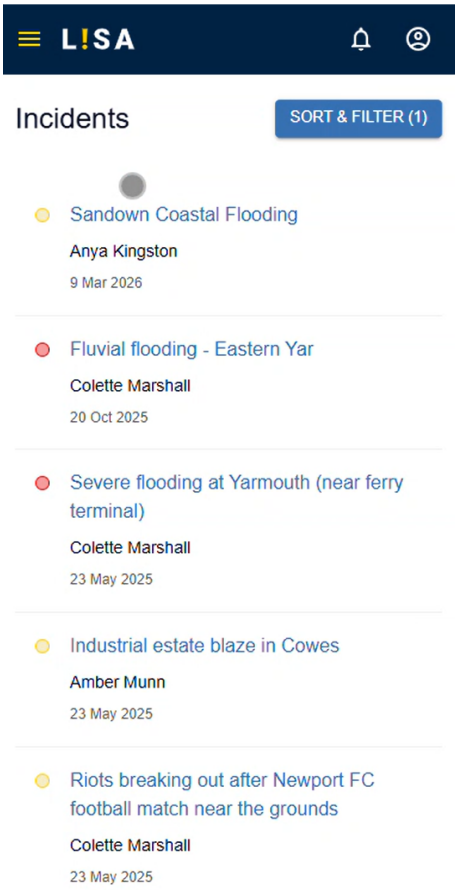
09 Alerts Card And Notifications

The Alerts card displays your current unread notification count. An alert is triggered when a responder mentions you in a log entry or assigns you a task. Select the blue arrow to open your notifications and view the entries requiring your attention.



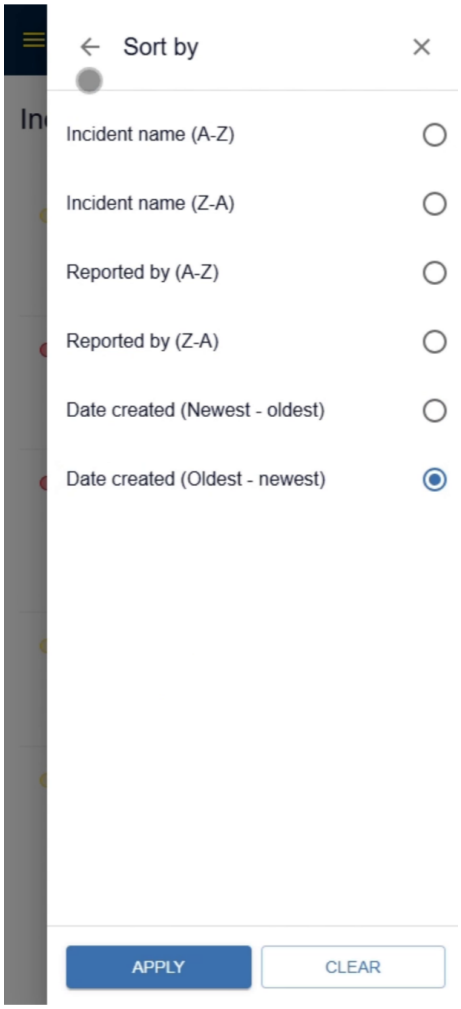
10 Accessing the Incidents Page

Use the sidebar to access the Incidents page. This lists all incidents, sorted by newest to oldest.



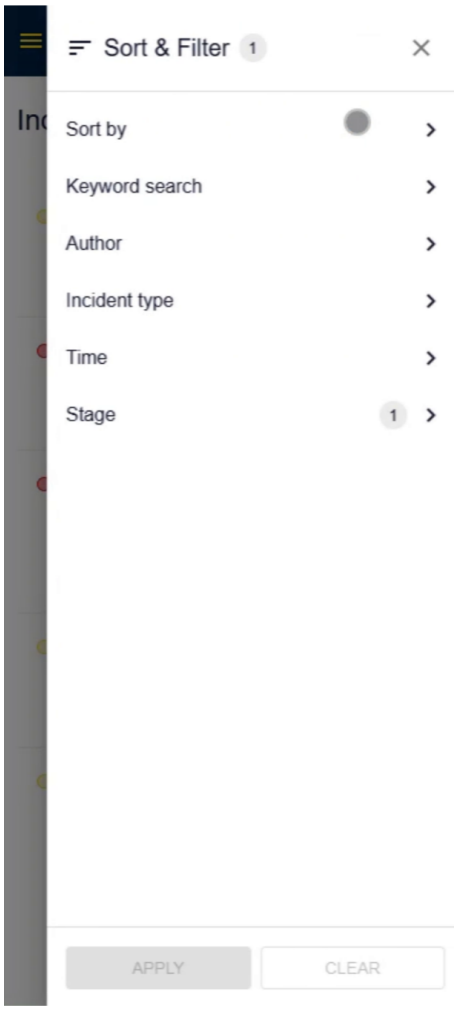
11 Incidents Page Sorting Options

The Sort and Filter button allows this order to be changed. Incidents can be sorted alphabetically by incident name, alphabetically by reporter, or from oldest to newest.



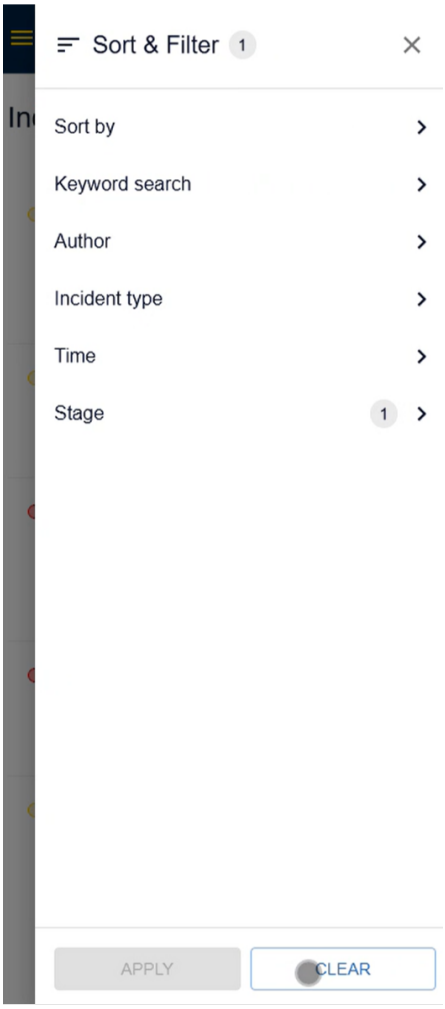
12 Incidents Page Filtering Criteria

You can also filter incidents by keyword search, author, incident type, time of occurrence, or incident stage. Make any changes and click apply to filter the Incident Page to only show relevant results.



13 Clearing Incident Filters

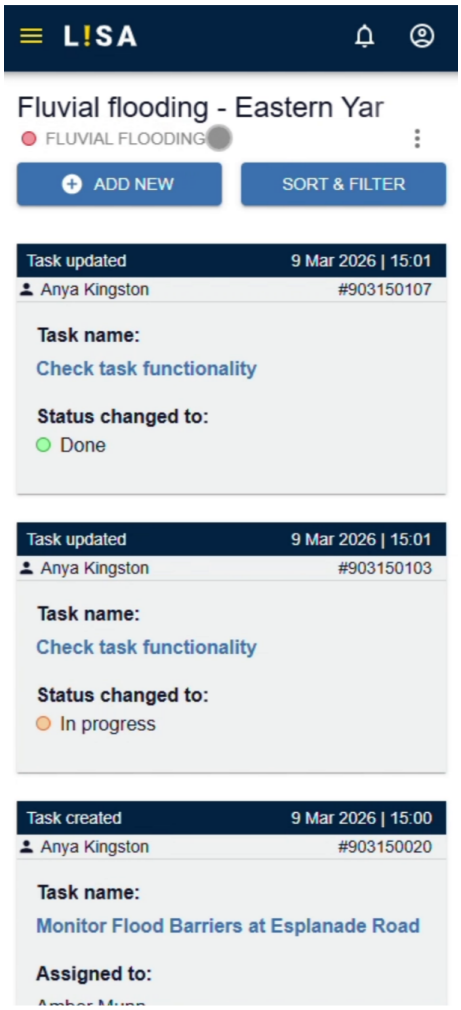
Filters can be removed by selecting the Sort and Filter button and then selecting Clear. This returns the page to the default view showing all incidents sorted from newest to oldest.



14 Specific Incident Pages

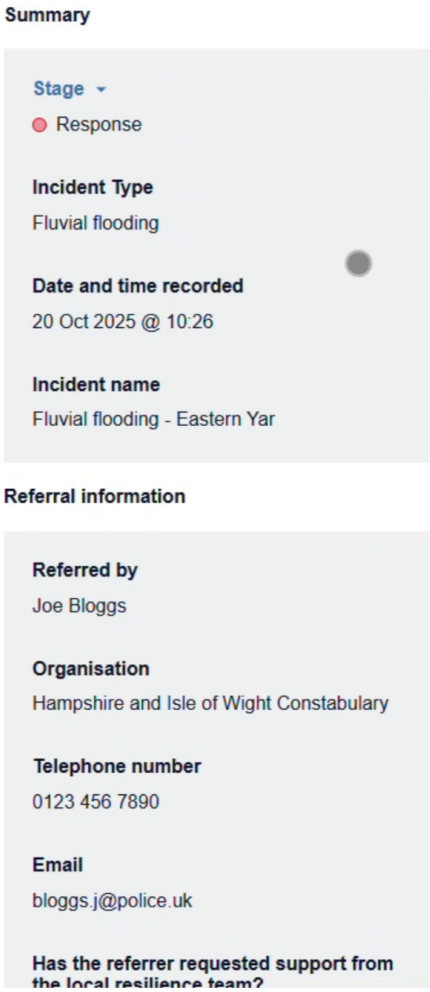
Select an incident to open its dedicated incident page.

- The dedicated incident page displays the immutable log of tasks, actions, and updates that have occurred since the incident began.
- Each log entry includes a date and time stamp, a unique identification number, and the name of the person who performed the action.
- The coloured dot beside the incident reflects the incident stage. Red indicates response, yellow indicates monitoring, pink indicates recovery, and white indicates closed.



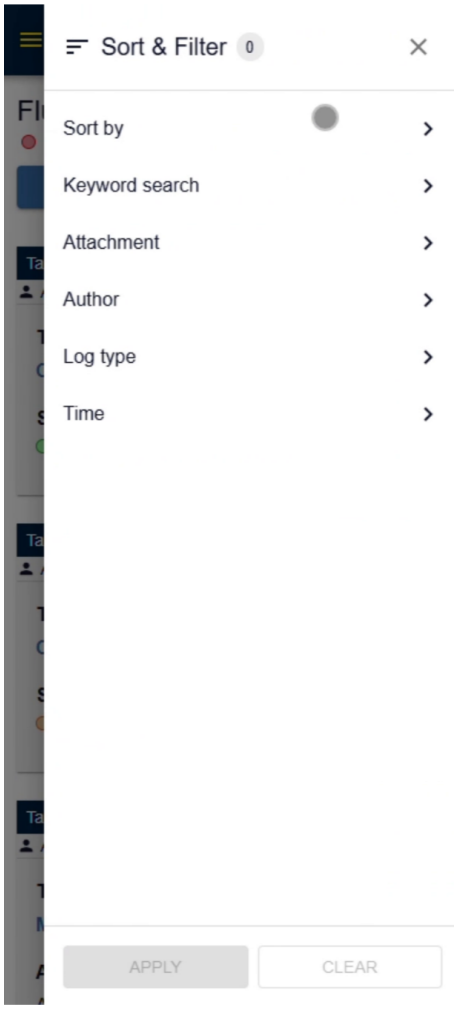
15 Incident Overview Access

You can view an overview of the incident by selecting the three dots on the right side of the screen. This overview includes a summary and referral information. Select the back arrow to return to the main incident page.



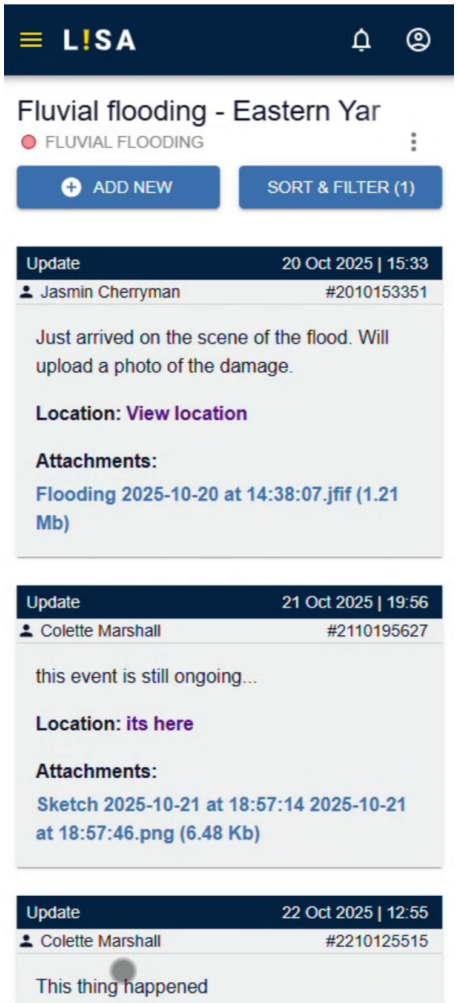
16 Sorting And Filtering Logs

You can sort and filter the log to quickly locate key events. Use the Sort and Filter button to change the order of entries or search by keyword, attachment type, author, log type, or time. Select Apply to apply these changes.



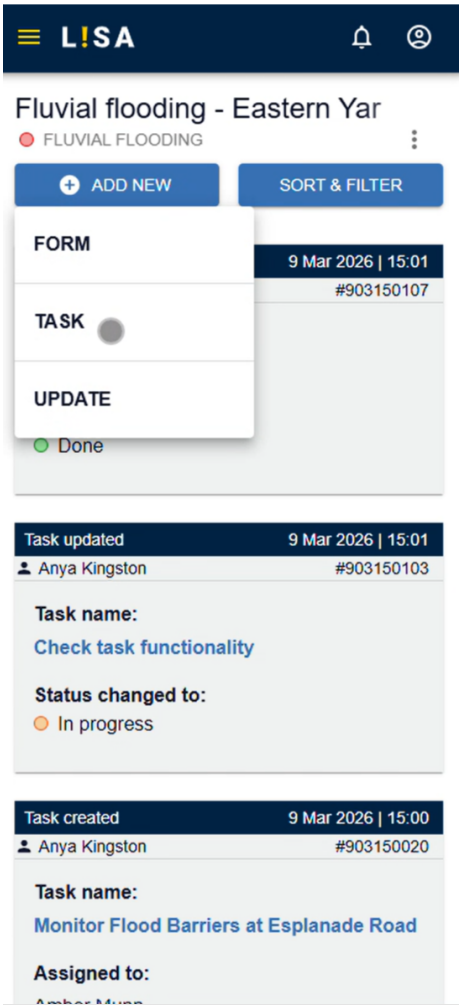
17 Viewing Log Entry Details

You can select the highlighted areas within log entries to view additional information such as task names or locations.



18 Adding Entries To Incident

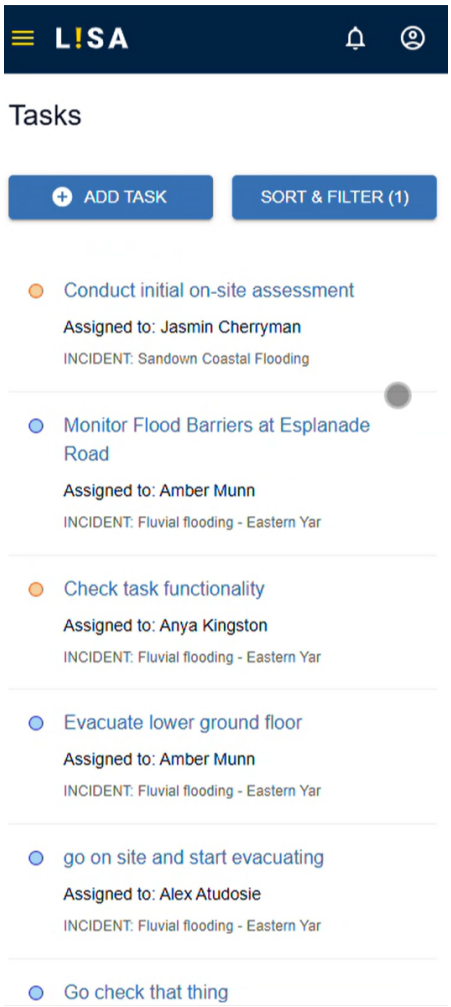
The Add New button allows you to add a new form, task, or update to the current incident. This process is explained further in LISA User Guide 2.



19 Tasks Page Overview And Filters

The Tasks page allows you to view a log of all tasks across all incidents. By default, it displays only tasks that are marked as to do or in progress, but the sort and filter panel can also be used to display completed tasks.

- You can filter tasks by keyword, author, assignee, or incident to tailor the list to your needs.
- Select a task to view its details or to change its status or assignee.
- The Add Task button allows you to create a new task. Further information on adding tasks and managing tasks can be found in LISA User Guide 2.



20 For more information on LISA...

This completes the introduction to navigating the LISA demonstrator. See LISA User Guide 2 for more information on logging data against incidents, or the Admin Guide for how to use LISA's administrative settings. For further information about LISA and the National Digital Twin Program, visit the National Digital Twin Program website.

Learn to access LISA, navigate its interface, manage incidents and tasks, and use filters and notifications to streamline crisis management workflows.
